The invention relates to a novel isolated polynucleotide comprising plant nucleotide sequence having an open reading frame that encodes

ນ ນ

Claim 1; SEQ ID NO 175; 299pp; English.

pathogen.

WPI; 2003-184052/18. P-PSDB; ADA48106.

Moughamer hu T;

New polynucleotide comprising a plant nucleotide sequence having an open reading frame that encodes a polypeptide associated with disease resistance, useful for conferring resistance or tolerance to a plant

The polynucleotide of the invention is useful for conferring resistance or tolerance to a plant pathogen. The present sequence represents a protein conferring disease resistance used in the invention.

                                                                                S
                                                                                                                                   á
                                                                                                                                                                                                                                                                                 맑
                                                                                                                                                                   В
                                                                                                                                                                                                                                                                                                       The invention relates to novel abiotic stress responsive polynucleotides CC and polypeptides. Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are methods for using the polynucleotides and polypeptides to alter the CC responsiveness of a plant to abiotic stress. The invention is useful in CC agriculture. The nucleic acid is useful for determining whether a test CC plant has been exposed to an abiotic stress condition. It is also useful for selecting an agent that alters abiotic stress regulated CC polynucleotide expression in a plant cell, and to identify a homolog CC ortholog to an abiotic stress responsive polynucleotide. The nucleic acid CC molecule and the polypeptide encoded by it are useful in altering the CC responsiveness of a plant to an abiotic stress, such as cold stress, salt CC stress, osmotic stress or any of their combinations. The present sequence CC is used in the exemplification of the invention
                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 774
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              gene expression

The polynucleotide of the invention is useful for conferring resistance tolerance to a plant pathogen. The present sequence represents a gen conferring disease resistance used in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polynucleotide reading frame that resistance, useful

Also disclosed are vectors, expression cassettes, host cells, and plants containing such polynucleotides. Also disclosed are methods for using the polynucleotides and polypeptides to alter the responsiveness of a plant to abiotic stress. The invention is useful in agriculture. The nucleic acid is useful for determining whether a test plant has been exposed to an abiotic stress condition. It is also useful for selecting an agent that alters abiotic stress regulated for polynucleotide expression in a plant cell, and to identify a homolog or ortholog to an abiotic stress responsive polynucleotide of a plant to an abiotic stress, such as cold stress, salts areas, osmotic stress or an abiotic stress, such as cold stress, salts areas, osmotic stress or any of their combinations. The present sequence is used in the express or any of their combinations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 774 BP; 150
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        is used in the exemplification of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     wet leaf, stunting, elongation and texture phenotypes, which are thought will be agronomic traits beneficial to the farmer. As such, these novel phenotypes can affect growth regulation i.e. useful for creating dwarf varieties, exhibit resistance to insects or heat stress, confer changes in pigment content such that plants have enhanced vitamin production or delayed senescence and also for example produce plants that control the production of ethylene. Furthermore, the present invention comprises generating transgenic plants, as well as reproducibly altering the visual phenotype of plant seeds, plant tissues and plant cells containing the polynucleotides described herein. This polynucleotide is a homologue of a DNA sequence that confers an altered visual phenotype when expressed in plants, the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to the identification and isolation of novel nucleic acid molecules that confer altered visual phenotypes in plants. Specifically, it refers to modifications of plant architecture and/ or leaf surface features in plants, such as chlorotic, bleaching, etching,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ds; visual phenotype; plant; architecture; leaf surface; chlorotic; bleaching; etching; wet leaf; stunting; elongation; texture; agronomic trait; growth regulation; dwarf variety; insect resistancheat stress; transgenic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
The invention comprises DNA sequences which confer an altered metabolic characteristic when they are expressed in a plant. The DNA sequences of the invention are useful for producing plants with an altered metabolic characteristic, such as: altered acid metabolism, alcohol metabolism, fatty acid metabolism, branched fatty acid metabolism, alkaloid or other base metabolism, altered anino acid metabolism, altered ester metabolism, altered stered phenolic metabolism, altered carbohydrate metabolism, altered sterol, oxygenated terpene, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                alcohol metabolism; fatty acid metabolism;
branched fatty acid metabolism; alkaloid metabolism;
amino acid metabolism; ester metabolism; glyceride metabolism;
phenolic metabolism; carbohydrate metabolism; sterol metabolism;
terpene metabolism; isoprenoid metabolism; alkene metabolism;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ફ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert

                                                                                                                                                                                   The invention describes a transgenic plant comprising a recombinant CC polynucleotide of any one of more than 500 nucleotide sequences fully CC defined in the specification or its complement. The method of the CC invention can be used to produced a plant having altered traits such as: CC enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone CC sensitivity; disease resistance; sugar sensing; early or late flowering; CC altered flower structure, change in stem bifurcations, altered branching cpattern, reduced apical dominance, reduced trichome density; lack of CC trichomes; reduced ectopic trichome development; altered branching cc increased root growth; increased root hairs; altered seem morphology; CC altered cell proliferation or cell differentiation; rapid development; CC altered cell proliferation or cell differentiation; rapid development; CC size; decreased plant size; leaf morphology; seed morphology; seed biochemistry; increase in root anthocyanins; increase in plant CC anthocyanins, or alteration in light response or shade avoidance. The transgenic plant, polynucleotides and polypeptides are useful in CC bioinformatic search methods. This sequence represents a plant CC transcription factors isolated in the invention, that can be used in the creation of a transgenic plant with altered traits.

                                                                                                                                                                                                                                                                                                                                                            plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This sequence represents a plant full length insert polynucleotide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide of the invention are also useful in physical arrays of molecules and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens pests, for conferring increased resistance to plant disease, or for

The invention describes a transgenic plant comprising a recombinant CC polynucleotide of any one of more than 500 nucleotide sequences fully CC defined in the specification or its complement. The method of the CC invention can be used to produced a plant having altered traits such as: CC enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone CC sensitivity; disease resistance; sugar sensing; early or late flowering; CC altered flower structure, change in stem bifurcations, altered branching pattern, reduced apical dominance, reduced trichome density; lack of CC trichomes; reduced ectopic trichome development; altered trichome CC development; increase in trichome number; altered seed development; company increase in trichome number; altered seed development; CC altered cell proliferation or cell differentiation; rapid development; CC altered cell proliferation or cell differentiation; rapid development; CC size; decreased plant size; leaf morphology; seed morphology; seed biochemistry; increase in root anthocyanins; increase in plant CC transgenic plant, polynucleotides and polypeptides are useful in bioinformatic search methods. This sequence represents a plant transgenic plant methods. This sequence represents a plant crease in root anthocyanins; increase in the consistion of a transgenic plant with altered traits.
                                                                                                                                                                                                                                                                                                                                                                                                                       New transgenic

                                                                                                                                                                                    ঠ
                                                                                                                                                                                                                 The invention describes a recombinant DNA construct comprising a CC polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at CC ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide CC ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide CC ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide cC ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide and as CC ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide construct is useful for CC improving plant tolerance to cold, heat, drought, herbicides, extreme CC consortic conditions, pathogens or pests, for manipulating growth rate in CC light cells by modification of the cell cycle pathway, for conferring CC light or plant growth regulators, for increasing the rate of homologous crecombination in plants, for improving yield by modification of CC content. This sequence represents a plant full length insert content. This sequence represents a plant full length insert content. This sequence represents a plant full length insert content. This sequence represents a plant full length insert content. This sequence represents a plant full length insert content.
                                                                                                                                   Query Match

                                                                                                The invention describes a transgenic plant comprising a recombinant CC polynuclectide of any one of more than 500 nucleotide sequences fully CC defined in the specification or its complement. The method of the CC invention can be used to produced a plant having altered traits such as: CC enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone ce sensitivity; disease resistance; sugar sensing; early or late flowering; CC altered flower structure, change in stem bifurcations, altered branching pattern, reduced apical dominance; reduced trichome density; lack of CC trichomes; reduced ectopic trichome number; altered stem morphology; concreased root growth; increased not hairs; altered seed development; increased not contains; altered seed development; contains increased necrosis; increase in seedling or plant contains plant size; leaf morphology; seed morphology; seed biochemistry; increased not anthocyanins; increase in plant contains plant plant polynucleotides and polypeptides are useful in contains contains plant, polynucleotides and polypeptides are useful in contains contains search methods. This sequence represents a plant can search methods. This sequence represents a plant can search methods. This sequence represents a plant contains of a transgenic plant with altered traits.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This is a complete sequence. Genes were identified by a combination of several methods: Gene prediction programs including Fgenesh (http://www.softberry.com/), genscan (http://ccr.081.mit.edu/GENSCAN.html), GeneMarkHMM (http://genemark.biology.gatech.edu/GeneMark/), tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/ENNAscan-SE/), searches of the complete sequence against NCBI none redundant protein database (nr) (ftp://ncbi.nlm.nih.gov/blast/db) and the EST database at NCGR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Weng, Q., Zhang, L., Lu, Y., Mu, J., Lu, Y., Zhang, L.
